DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 21 & 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Newton et al (6,198,401).

Newton shows an integrated circuit, comprising: a first means (410) for detecting fast electromagnetic transient (EFT) fault; a second means (410) detecting an EFT fault; a logic tree (425) that receives signals from the first and second means and that outputs a fault detect signal indicative of whether either the first means the second means has detected an EFT fault. Newton discloses the claimed invention except for electromagnetic transient fault having a duration less than two hundred nanoseconds. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the first means for detecting a electromagnetic transient fault of Newton having a duration less than two hundred nanoseconds, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art.

Allowable Subject Matter

3. Claim 22 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. Claims 1-20 are allowed.

5. The following is an examiner's statement of reasons for allowance: with respect to claims 1 and 15, in addition to other limitations in the claims, the prior art fails to teach or disclose the applicant's invention as claimed, particularly the feature describing:

- each of digital logic storage element being initialized.

- detector circuits being distributed across at least a portion of the integrated circuit.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
